

## **SUBTERRANEAN TERMITES – APPEAL FOR SAMPLES**

Throughout southern Ontario the Eastern Subterranean termite, *Reticulitermes flavipes*, has invaded many communities.

We are doing research on the invasive biology of termites, and need to obtain as many samples from different geographic locations as possible.

THIS SUMMER, IF YOU ENCOUNTER TERMITES PLEASE CONTACT US. WITH YOUR COOPERATION WE WOULD LIKE TO COLLECT (IN ALCOHOL) 20-100 TERMITES PER COLONY. WHERE CONVENIENT, WE WOULD ALSO LIKE TO COLLECT LIVE TERMITES.

By arrangement, we can send you the necessary collection material and easy instructions.

Thank you in advance,

Dr. Graham Thompson
